

MEETING MINUTES

Dissemination and training on the ANFORA platform in Lucena

Date and time: 5 August 2026, approximately 11:00–11:53 (Spanish mainland time).

Format: Online meeting via Microsoft Teams.

Organisations: Lucena City Council, Evenor-Tech and BALAM Agriculture.

Status: Minutes prepared from the transcript and emails. Pending validation by the parties.

1. Participants

María Anaya-Romero and Javier Bravo García, for Evenor-Tech; representatives of BALAM Agriculture and Lucena City Council's Environmental Department, associated with urban-garden and educational activities.

2. Purpose and background

To present ANFORA and define a collaboration to disseminate its use and water-footprint training among educational centres, the urban-garden network and the citizens of Lucena within RURACTIVE. The previous awareness campaign held in December in the municipal market and streets was recalled.

3. Platform presentation

Evenor-Tech presented a free, reusable tool for understanding the relationship between water, food and territory. The crop explorer, the distinction between green, blue and grey water, recipe and menu calculations—using salmorejo as an example—the comparison of alternatives and the export of results were demonstrated.

Educational use was explained through explore, calculate, compare and discuss activities, with materials and an e-learning course. BALAM highlighted available local data from the Regional Government of Andalusia, as well as national and European data.

A joint target of at least 100 teachers and students was proposed. This initiative objective is not a municipal commitment to guarantee participation. Classroom adoption will depend on each centre and on teachers' interest and availability.

4. Collaboration and dissemination agreements

Two separate webinars were agreed: one for teachers and educational centres and another for the public, including allotment gardeners. The participating organisations would also coordinate social-media communication.

The City Council was willing to relay the initiative to educational centres and the garden network and broaden its reach. Evenor-Tech would provide training information, the platform link and registration instructions to support the communication.

The date, duration and objectives of each session would be announced, with advance registration and the link sent only to registrants. A forthcoming-activities section on the platform was suggested. These aspects require technical definition.

5. Actions and responsibilities

Action	Responsible / support	Timing
Send access and registration information; prepare the invitation.	Evenor-Tech / María Anaya-Romero	After the meeting.
Share prior school contacts and reinforce the invitation.	Evenor-Tech and Environmental Department	Reactivation from 1 September.
Disseminate among educational centres, gardens and citizens.	City Council, using Evenor-Tech materials and with BALAM coordination	Once the invitation is available.
Organise the two webinars and coordinate publications.	Evenor-Tech, BALAM and City Council	September; dates pending at close.
Explore collaboration with the Provincial Council / Córdoba Verde.	Municipal representative, with BALAM support	No fixed deadline.

6. Schedule and constraints

Training was scheduled from September to mid-November, before the impact report, in extendable one-hour sessions. The first half of September was considered for teachers and late September or early October for the public, subject to the local calendar.

Training in the gardens remained conditional on the renewal of concessions, which could continue until the end of the year. No specific days or times were set.

7. Proposals requiring further definition

Extend the scope to restaurants, shops, families and other groups through short videos and outreach materials. Their usefulness in linking water footprint to everyday consumption and food waste was considered.

Explore participation by the Provincial Council and Córdoba Verde without treating any collaboration as formalised. A possible relationship between the initiatives' maps of organisations and establishments was discussed.

Consider written collaboration agreements if deemed necessary. Evenor-Tech stated that interested organisations had not formalised participation in writing and offered to prepare an agreement. No agreement was approved or signed at the meeting.

It was noted that the demonstrated tool calculates water footprints but does not include specific guidance for reducing them in gardens. This observation defines the scope of the presented utility and does not constitute a commitment to develop new functions.

8. Email follow-up after the meeting

6 August 2026. María sent the draft announcement to the other representatives for review, proposing 3 September at 12:00 for teachers and 24 September at 12:00 for citizens. She requested comments before publication and links for municipal and local dissemination.

14 August 2026. BALAM recommended an afternoon time to encourage citizen participation, the use of original logos and removal of the Córdoba Verde logo unless collaboration was confirmed. María agreed to move the second webinar to 23 September at 18:00, remove the Córdoba Verde logo and update the remaining logos. In a later email in the same thread, Jesús Manuel sent the revised infographic.

These communications document the later invitation arrangements. Alone, they do not prove webinar delivery, attendance, or completion of all outreach actions.

9. Sources and validation

Meeting transcript: source transcript file incorporated on 6 August 2026. Main passages: 1:24 (introductions); 23:03–28:01 (collaboration and information dispatch); 31:09 (joint teacher-and-student target); 38:36–43:22 (gardens and institutional collaboration); 44:17–50:17 (webinars and closing).

Gmail: invitation “ANFORA Project (Lucena City Council - EVENOR TECH - BALAM API)”, 3 August; thread “Follow-up meeting with Lucena City Council”, 3 August; Read AI meeting report, 5 August; thread “Draft ANFORA webinar announcement for review”, started on 6 August, and subsequent replies.

Document drafted on 4 September 2026. Obvious transcription errors in the names ANFORA, Evenor-Tech and RURACTIVE have been standardised. These minutes are submitted for review; approval by the organisations and, where applicable, signatures remain pending.
